EXPERIMENT-8

8. Write a C program for monoalphabetic cipher is that both sender and receiver must commit the

permuted cipher sequence to memory. A common technique for avoiding this is to use a keyword from

which the cipher sequence can be generated.

For example, using the keyword CIPHER, write out the keyword followed by unused letters in normal

order and match this against the plaintext letters:

plain: a b c d e f g h i j k l m n o p q r s t u v w x y z

cipher: C I P H E R A B D F G J K L M N O Q S T U V W X Y Z
